

Ravi Teja Talari

Hello, my name is Ravi Teja Talari, I'm currently pursuing masters at the University of Texas at Dallas. Before this, I have done my undergraduate at CVR college of Engineering, India. After my undergrad, I've got placed into a Hewlett Packard Enterprise, Bengaluru as a Full Stack Developer. After working at Hewlett Packard Enterprise for one year, I've worked as an Android developer at Hyper Thread Solutions for one year.

When I was in my schooling, I used to play a lot of video games. One day, when I thought of buying Prince of Persia which was released recently in those days, I just thought of checking the review about that game. I just googled and the first page that popped up was IGN's. After playing the game the first thing that I've felt was that the IGN's review was apt and was also useful. Since then, I've used IGN for many other purposes like watching the walkthroughs and also to get the latest updates about upcoming games. This was my connection to IGN.

I'm an enthusiastic software developer who always tries to solve the problems that people face in their daily life with the software products that I develop. I feel like the requirement of IGN aligns well with the skill set that I have as an Android Developer and also as a Full Stack Developer. That's why I feel like I should get an opportunity to participate in IGN's Code Foo program.
